## Acids an Bases Part 2

## Bronstead's and Lowry's Definition of Acids and Bases

Acids are substances whioh donate protons. Bases are substances which accept protons.

## Example

## $\mathrm{NH}_{3}+\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{NH}_{4}{ }^{+}+\mathrm{OH}^{-}$

## Example

## $\mathrm{NH}_{3}+\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{NH}_{4}^{+}+\mathrm{OH}^{-}$ BASE ACID

Accepted
Donated proton
proton

## Conjugate Acids and

 Bases* Conjugate Acid - Base Pairs - When using the Bronsted concept for acids and bases, consider all acid - base reactions as reversible equilibria.

## Example

## $\mathrm{NH}_{3}+\mathrm{H}_{2} \mathrm{O} \leftrightarrows \mathrm{NH}_{4}^{+}+\mathrm{OH}^{-}$ BASE ACID

## Example

## $\mathrm{NH}_{3}+\mathrm{H}_{2} \mathrm{O} \leftrightarrows \mathrm{NH}_{4}^{+}+\mathrm{OH}^{-}$ BASE ACID CONJUGATE CONJUGATE ACID BASE

## Example

# $\mathrm{NH}_{3}+\mathrm{H}_{2} \mathrm{O} \leftrightarrows \mathrm{NH}_{4}^{+}+\mathrm{OH}^{-}$ BASE ACID CONJUGATE CONJUGATE ACID BASE 

A base is always paired with a conjugate acid. An acid is always paired with a conjugate base.

## Example

$$
3 \rightarrow \text { ? }
$$

## Example

## HF <br> ACID <br> . <br> $\mathrm{H}_{2} \mathrm{O}$ <br> $\rightarrow \mathrm{F}^{-}$ <br> 5 <br> $\mathrm{H}_{3} \mathrm{O}^{+}$ <br> BASE <br> CONJUGATE CONJUGATE BASE ACID

Challenge Questions

* $\mathrm{AlOHH}_{3}+3 \mathrm{HCl} \rightarrow \mathrm{AlCl}_{3}+3 \mathrm{H}_{2} \mathrm{O}$
$* 2 \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}+\mathrm{Ba}(\mathrm{OH})_{2} \rightarrow 2 \mathrm{H}_{2} \mathrm{O}+\mathrm{Ba}\left(\mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}_{2}\right)_{2}$
$* 2 \mathrm{KOH}+\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow \mathrm{~K}_{2} \mathrm{SO}_{4}+2 \mathrm{H}_{2} \mathrm{O}$

## Example

$$
\underset{\text { BASE }}{\mathrm{AlOH}_{3}}+\underset{\text { ACIO }}{3 \mathrm{HCl}} \rightarrow \underset{\mathrm{CB}}{\mathrm{AlCl}_{3}}+3 \mathrm{H}_{\mathrm{CA}}^{\mathrm{HO}}
$$

## * $2 \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}+\mathrm{Ba}(\mathrm{OH})_{2} \rightarrow 2 \mathrm{H}_{2} \mathrm{O}+\mathrm{Ba}_{2}\left(\mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}_{2}\right)_{2}$ ACID BASE <br> CA <br> CB

## $* 2 \mathrm{KOH}+\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow \mathrm{~K}_{2} \mathrm{SO}_{4}+2 \mathrm{H}_{2} \mathrm{O}$ BASE <br> ACID <br> CB <br> CA

## pH Scale

## pH Scale

* pH of a solution is a measure of its hydronium ion concentration.
* "p" stands for potential and "H" stands for hydrogen; hence, the potential of a substance to attract hydrogen ions

## pH Scale

* The pH scale is a number scale from 0 to 14 to describe the concentration of hydronium ions in a solution.
* A pH of 7 indicates a neutral solution.
* Acids have a pH less than 7.
* Bases have a pH greater than 7.
* If you add an acid to water, the concentration of $\mathrm{H} 30+$ increases and the concentration of OH -decreases.
* The lower the pH value, the greater the $\mathrm{H}_{3} \mathrm{O}^{+}$ion concentration in solution is.
* If you add a base to water, the concentration of OH- increases and the concentration of $\mathrm{H}_{3} \mathrm{O}^{+}$decreases.
* The higher the pH value, the lower the $\mathrm{H}_{3} \mathrm{O}^{+}$ion concentration is.

- Each pH unit is 10 times as large as the previous one
- A change of 2 pH units means 100 times more basic or acidic

## Calculating pH

$$
\begin{aligned}
*\left[\mathrm{H}_{3} \mathrm{O}^{+}\right] & =10-\mathrm{pH} \\
* \mathrm{pH} & =-\log \left[\mathrm{H}_{3} \mathrm{O}^{+}\right] \\
*[\mathrm{OH}-] & =10-\mathrm{oHH} \\
* \mathrm{pOH} & =-\log [\mathrm{OH}-]
\end{aligned}
$$

| Type of Indicator | Colour in Acid | Colour in Base |
| :---: | :---: | :---: |
| Phenol Red | Yellow | Red |
| Bromothymol Blue | Yellow | Blue |
| Blue Litmus Paper | Red | Stays Blue |
| Red Litmus Paper | Stays Red | Blue |
| Phenolphthalein | Colourless | Red |
