Categories Within the Period Table

Part A: Properties

Use page 120 of your textbook to SUMMARIZE the characteristics of each of the following categories in the periodic table. (8 marks)

| Periods |
|--|
| Families |
| Metals |
| Alkali Metals |
| Non-metals |
| Halogens |
| Noble Gases |
| Hydrogen |
| Compare and contrast groups and periods. (2 marks) |

Part B: Colour Coding

Colour the periodic table on the back of this page according to the legend below. NOTE THAT SOME ELEMENTS MAY HAVE MORE THAN ONE COLOUR ASSIGNED TO THEM. In this case, split the element in half. For example, lithium is both a metal and an alkali metal. You would colour half of lithium blue (to show it's a metal) and the other half yellow (to show it's an alkali metal).
